

ENTERPRISE SYSTEM HEALTH DASHBOARD

AI Observability & Infrastructure Intelligence Report

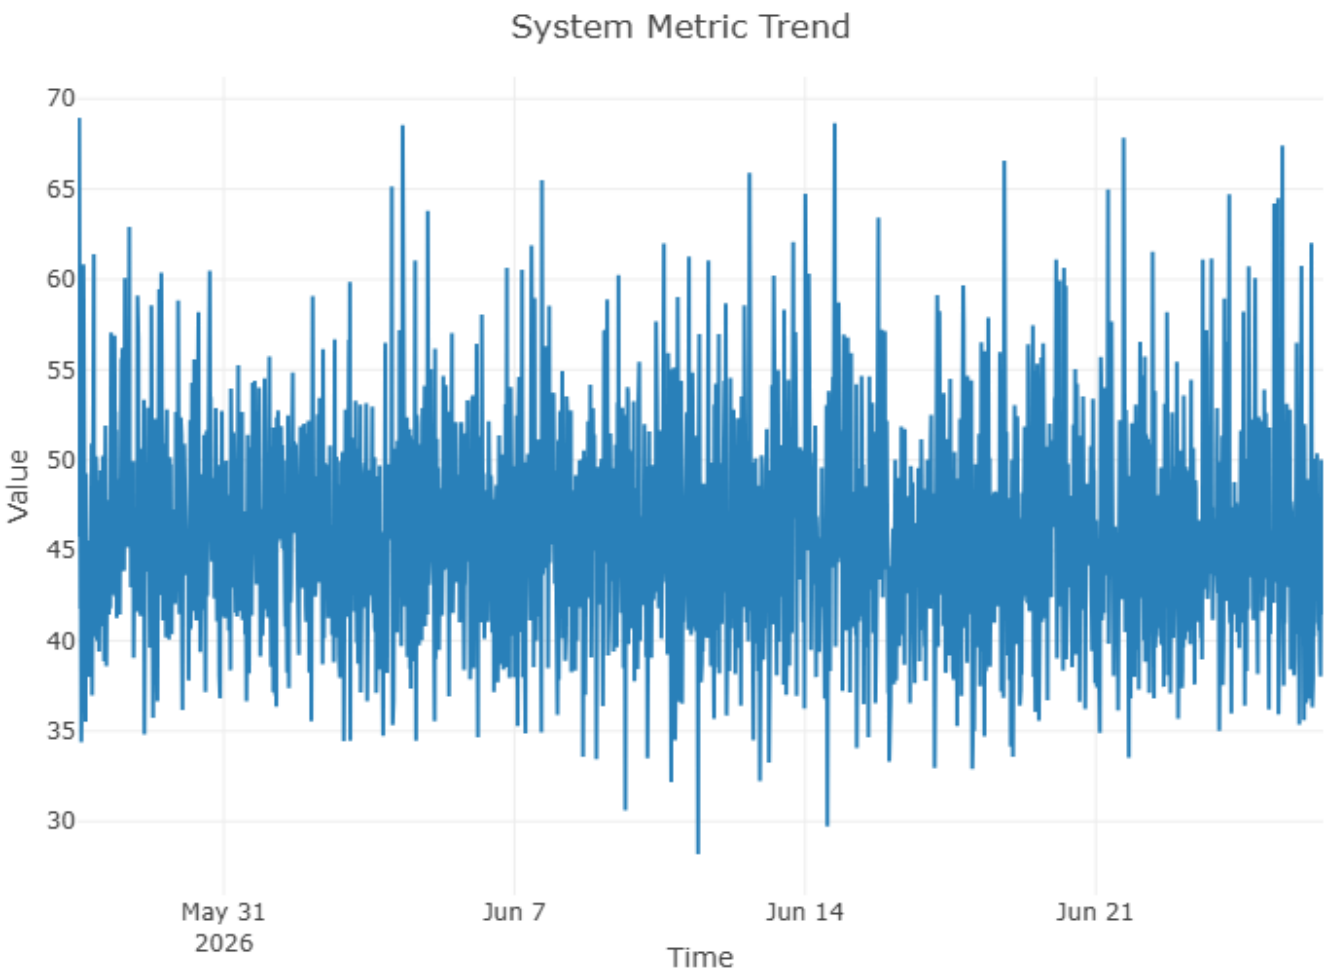

Executive Summary

System processed 11520 telemetry records.

Detected:

- 115 critical logs
- 6 high severity incidents
- 565 anomalies

Overall system posture is LOW with health score 94.1/100.

AI Observability Insights

Structured System Health Report

1. Overall Health Score: 65/100

Justification:

- Moderate CPU usage (avg 46%) is acceptable, but spikes to 99% (LEGACY-SRV-01) indicate instability.
- Critical memory saturation (Max Memory: 99%) observed across multiple servers (LEGACY-SRV-01, LEGACY-SRV-02, DB-CLUSTER-03).
- Frequent anomalies (12 in 24h) and recurring errors (transaction rollbacks, API timeouts, file locks) degrade reliability.
- Historical incidents (e.g., database deadlocks, memory overflow) suggest unresolved systemic issues.

2. Detected Anomalies

Key Metrics with Severity:

- CPU Spikes (Critical):
 - `LEGACY-SRV-01`: 99.67% (2026-06-26 04:37:21)
 - `MAINFRAME-A`: 96.69% (2026-06-25 23:22:21)
- Memory Pressure (High):
 - `LEGACY-SRV-02`: 97.59% (2026-06-26 06:07:21)
 - `DB-CLUSTER-03`: 95.34% (2026-06-26 07:07:21)
- Disk I/O Spikes (Medium):
 - `DB-CLUSTER-03`: 96.22% (2026-06-25 23:22:21)
 - `LEGACY-SRV-02`: 98.33% (2026-06-26 03:22:21)

3. Log Analysis

Critical/Error Log Summary:

- Security: 1 critical log (`LEGACY-SRV-01` security breach attempt).
- Database Issues:
 - 5x transaction rollbacks (across `LEGACY-SRV-01`, `DB-CLUSTER-03`, `MAINFRAME-A`).
 - 2x database deadlocks (historical incidents).
- Connectivity Failures:
 - 2x mainframe connection failures (`LEGACY-SRV-02`, `DB-CLUSTER-03`).
 - 3x API timeouts (`LEGACY-SRV-02`, `MAINFRAME-A`).
- Resource Contention:
 - 3x file lock errors (`LEGACY-SRV-02`, `DB-CLUSTER-03`).

4. Top 3 Prioritized Maintenance Actions

1. Memory Optimization (Urgent):

- Investigate and resolve memory leaks in `LEGACY-SRV-02` and `DB-CLUSTER-03`.
- Increase monitoring thresholds for proactive alerts.

2. CPU Load Balancing (High):

- Redistribute workloads from `LEGACY-SRV-01` and `MAINFRAME-A` during peak usage.
- Review cron jobs/batch processes causing spikes.

3. Database Stability (Medium):

- Audit transaction rollbacks and deadlocks in legacy CRM.
- Optimize queries and implement retry logic for API timeouts.

Recommendation: Schedule a root-cause analysis (RCA) for recurring incidents (e.g., deadlocks, file locks) and upgrade legacy components if feasible.
