

ENTERPRISE SYSTEM HEALTH DASHBOARD

AI Observability & Infrastructure Intelligence Report

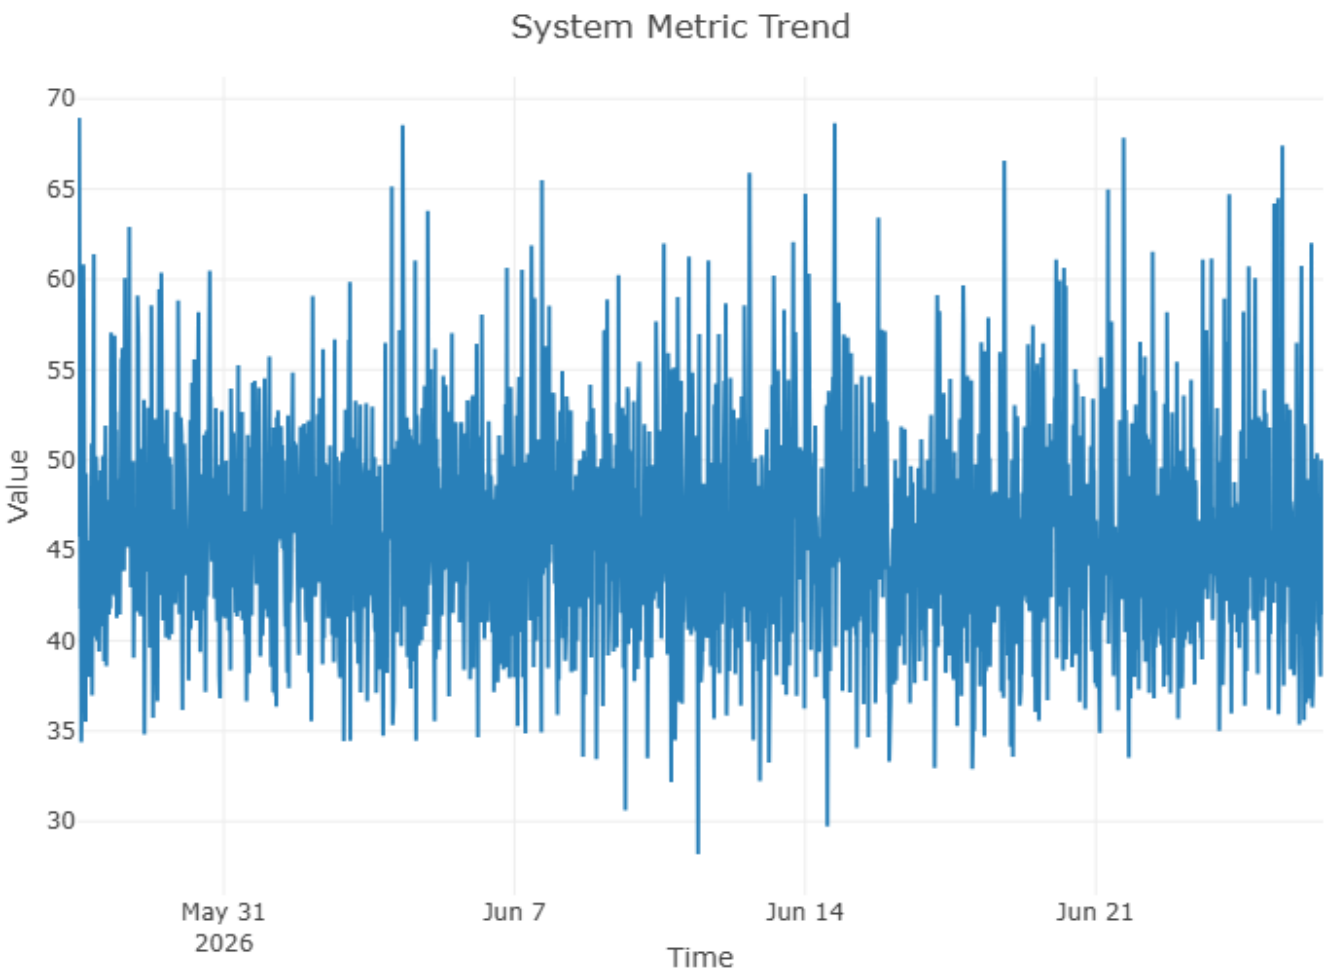

Executive Summary

System processed 11520 telemetry records.

Detected:

- 115 critical logs
- 6 high severity incidents
- 565 anomalies

Overall system posture is LOW with health score 90.2/100.

AI Observability Insights

Structured System Health Report

1. Overall Health Score: 68/100

Justification:

- CPU Usage: Average (46%) is acceptable, but spikes to 99% indicate resource contention.
- Memory Usage: Critical (99% max) shows severe memory pressure, especially on `MAINFRAME-A` and `LEGACY-SRV-01`.
- Anomalies: Frequent CPU/memory spikes and disk I/O issues (e.g., `DB-CLUSTER-03` at 96% disk I/O).
- Logs/Incidents: Recurring transaction rollbacks, API timeouts, and security breaches degrade reliability.

2. Detected Anomalies

- CPU Spikes:
 - `LEGACY-SRV-01`: 99.67% (2026-06-26 04:37:21)
 - `MAINFRAME-A`: 96.69% (2026-06-25 23:22:21)
- Memory Pressure:
 - `LEGACY-SRV-02`: 97.59% (2026-06-26 06:07:21)
 - `DB-CLUSTER-03`: 95.34% (2026-06-26 07:07:21)
- Disk I/O Contention:
 - `DB-CLUSTER-03`: 96.22% (2026-06-25 23:22:21)
 - `LEGACY-SRV-02`: 98.33% (2026-06-26 03:22:21)

3. Log Analysis (Critical/Error Logs)

- Security:
 - `CRITICAL`: Security breach attempt on `LEGACY-SRV-01` (2026-06-25).
- Transaction Failures:
 - 6 instances of "Transaction rollback triggered" across multiple servers.
- Connectivity Issues:
 - `ERROR`: Failed mainframe connections (`LEGACY-SRV-02`, `DB-CLUSTER-03`).
- Performance Bottlenecks:
 - 3 API timeouts (30s) on `MAINFRAME-A` and `LEGACY-SRV-02`.
 - 3 instances of "File lock contention" (potential deadlocks).

4. Top 3 Prioritized Maintenance Actions

1. Memory Optimization

- Investigate and resolve memory leaks (e.g., `MAINFRAME-A` at 93.25% memory usage).
- Upgrade or reallocate resources for `LEGACY-SRV-01` and `LEGACY-SRV-02`.

2. CPU/Disk I/O Tuning

- Address CPU spikes via load balancing or process optimization.
- Resolve disk I/O contention on `DB-CLUSTER-03` (e.g., index optimization, storage upgrade).

3. Transaction & Deadlock Analysis

- Audit transaction rollbacks and deadlocks (linked to `DB-CLUSTER-03` and legacy CRM).
- Implement retry logic or query optimization to reduce API timeouts.

Recommendation: Schedule immediate review of memory and I/O subsystems, followed by a root-cause analysis for recurring transaction failures.
